

Guidance for the Assessment of Proficiencies for Pre-Registration Nurses

(Scottish PAD) Version: 1.0

Introduction to the Guidance

P1: Being an accountable professional

P2: Promoting health and preventing ill health

P3: Assessing needs and planning care

P4: Assessing needs and planning care

P5: Leading and managing nursing care and working in teams

P6: Improving safety and quality of care

P7: Coordinating care

Introduction

The guidance for the assessment of proficiencies for pre-registered nurses, has been created by stakeholders across; practice (Practice Education Facilitators), nursing educators (across fields of nursing) and nursing students. The purpose of the guidance is to support nursing students and their practice assessors and supervisors during the nursing assessment period on placements.

The guidance offers suggestive actions to support evidence of completion of each specific proficiency, across the three parts. It should be noted by all users of this guidance, that **the student nurse does not need to demonstrate all the suggestive actions in order to meet the proficiency**, these should be utilised as suggestions. In addition, the document provides links to eLearning opportunities for nursing students, to support their learning, increase knowledge and support evidence of meeting the proficiency.

The guidance also offers suggestive assessment methods that could be utilised in the assessment of proficiencies and further information on the use of spoke opportunities. In addition, information is provided regarding the supervision of student nurses, governed by the NMC (2018) Standards of Education.

Please note:

The following guidance offers suggestions, regarding potential actions and methods of assessment, to support the completion of proficiencies. This is general guidance; considerations will have to be applied based on the placement area and the policies and procedures that govern practice, specific to that trust, organisation or clinical area.

Navigating the 'Guidance for the Assessment of Proficiencies for Pre-Registration Nurses – Supporting Information

Introduction

The guidance for the assessment of proficiencies for pre-registered nurses, has been created by stakeholders across; practice (Practice Education Facilitators), nursing educators (across fields of nursing) and nursing students. The purpose of the guidance is to support nursing students and their practice assessors and supervisors during the nursing assessment period on placements.

The guidance offers suggestive actions to support evidence of completion of each specific proficiency, across the three parts. It should be noted by all users of this guidance, that **the student nurse does not need to demonstrate all the suggestive actions in order to meet the proficiency**, these should be utilised as suggestions. In addition, the document provides links to e-learning opportunities for nursing students, to support their learning, increase knowledge and support evidence of meeting the proficiency.

The guidance also offers suggestive assessment methods that could be utilised in the assessment of proficiencies and further information on the use of spoke opportunities. In addition, information is provided regarding the supervision of student nurses, governed by the NMC (2018) Standards of Education, with specific regards to invasive clinical skills.

Key:

Proficiencies with *	Can be completed in year two or year three
Proficiencies in blue	Related to invasive clinical skills (see guidance below for more information).

Please note:

The following guidance offers suggestions, regarding potential actions and methods of assessment, to support the completion of proficiencies. This is general guidance, considerations will have to be applied based on the placement area and the policies and procedures that govern practice, specific to that trust, organisation or clinical area.

NMC Key Statements

NMC Key Statements	Considerations	Cheshire and Merseyside Outcome Focussed Approach
The nursing procedures that a newly registered nurse must be able to demonstrate in order to meet the proficiency outcomes, outlined in the main body of this document, are set out in this annex.	An annex, is usually a standalone document that offers additional information than contained in the main document.	The Annex B procedures are in the annex to support the main document where the overall proficiencies are. Annex B is not the proficiencies they are procedures that supplement the Future Nurse Standards of Proficiency.
"At the point of registration, the registered nurse will be able to safely demonstrate the following procedures:"	What does 'demonstrate' mean in this context	Demonstrate = give a practical exhibition or explanation of how a skill, intervention or process works or is performed). and/or clearly show the existence or truth of (something) by giving proof or evidence (PAD, reflection etc)
"Practicable"	"The nursing procedures within this annex are set out in two sections. These requirements are relevant to all fields of nursing practice although it is recognised that different care settings may require different approaches to the provision of care. It is expected that these procedures would be assessed in a student's chosen field of practice where practicable."	Practicable = able to be done or put into practice successfully. and/or capable of being put into practice or of being done or accomplished. Therefore, acknowledgement should be made that some learning and assessment opportunities will be circumstantial (patients at that time, services being delivered and learning environment) and different assessment methods would be appropriate and relevant to use in achievement of these procedures (not proficiencies).

Part One Dependent

You will be working closely with your practice supervisor who will direct and guide you. Through this guided participation in care, you will be able to demonstrate delivery of safe, effective, person-centred care in a professional manner using appropriate nursing skills. You will also demonstrate a professionalism in your attitudes and values as well as a positive attitude to own learning

Part Two Developing Independence

You will be developing independence and your practice supervisor will offer guidance and support when required. You will actively participate in care with this guidance and will demonstrate increasing confidence and competence. You will also demonstrate an understanding of professional roles and responsibilities and will maximise opportunities to extend your own knowledge

Part Three Independent

You will be working independently and your practice supervisor will offer a more indirect form of supervision. You will demonstrate the ability to lead and coordinate care, and the ability to act as an accountable and responsive practitioner, demonstrating a comprehensive knowledge base that informs safe and effective practice. You will also assume responsibility for your own learning, as well as the learning of others

Examples of Suggested Method of Assessment

Accompanying each proficiency is some examples of potential / suggested methods of assessment that could be utilised to evidence the completion of a specific proficiency. For some proficiencies there may only be one method of assessment. For example: “Demonstrates effective hand washing” can only be completed using direct observation, which is due to the nature of the skill being assessed. However, for some there are various ways to evidence completion of the proficiency. Alternatively, it may be useful to consider a spoke placement if there is limited exposure to the proficiency in the practice learning environment.

The various methods of assessment include:

- Direct observation
- Demonstration of proficiency through discussion
- Spoke placement / Training opportunity
- Feedback

Examples of suggested method of Assessment

Direct observation supported by underpinning knowledge	Proficiency evidenced as completed, due to being observed and assessed by a registrant such as a qualified nurse.
Demonstration of proficiency through discussion	Achievement of proficiency which can be evidenced through demonstration of knowledge in the form of discussion (including research, reflection, application of national/local policy).
Spoke Placement / Training opportunity	Evidence for meeting the proficiency using spoke placements, within relevant teams / with relevant professionals/registrants. Training within the practice learning environment (if available), e.g. Breastfeeding Support Training Area based learning opportunities (Case studies, scenarios, learning activity)
Feedback (Staff, Service User, Caregivers)	Feedback from staff, service users and caregivers to evidence meeting of proficiency

Utilising Spoke Opportunities and Useful Links for Learners

Spoke / Short Visit Opportunities.

Utilising spoke opportunities during placement periods can be a very effective way of enhancing learning experiences. This being with regards gaining increased knowledge and exposure to a patient journey and the context of local service delivery and provision.

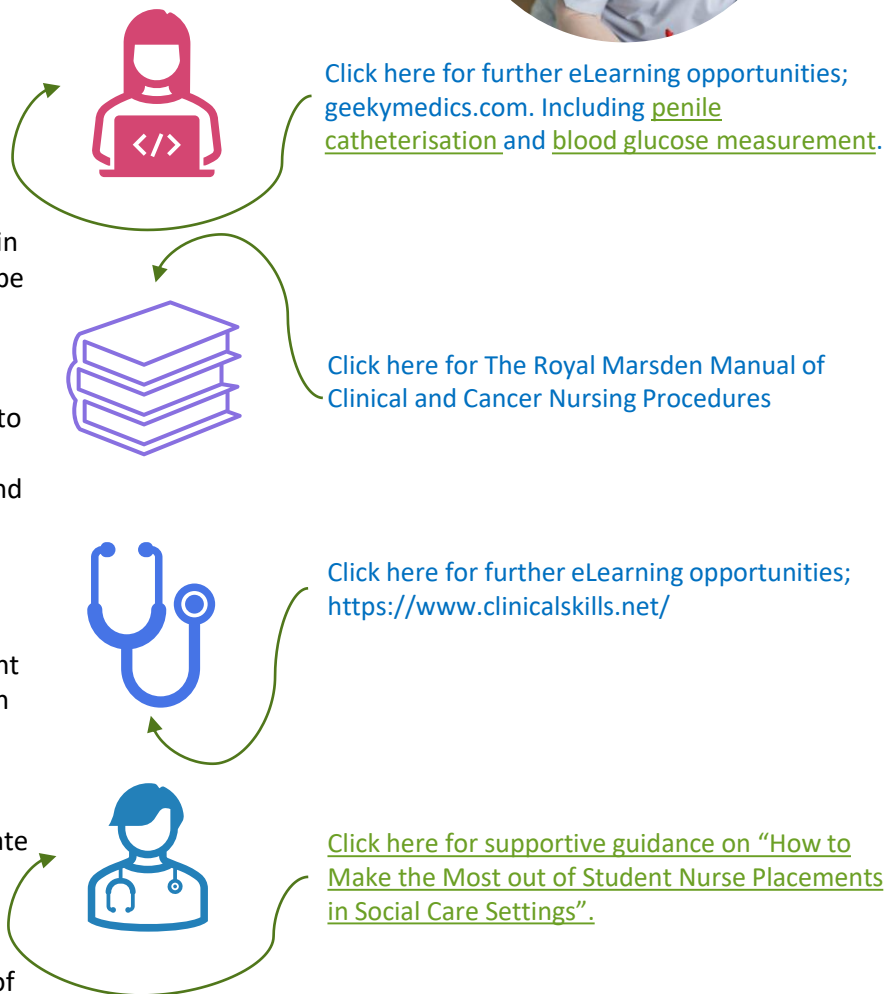

Utilising spoke placements can also support the development of knowledge and skills in relation to proficiencies. This being specifically with regards to proficiencies that may be difficult to achieve due to the opportunities of exposure, within the learners allocated placement area.

For example, a learner placed within a nurse-led clinic, may not have the opportunity to gain exposure to proficiencies regarding end-of-life care. So a spoke within a bereavement team or with a palliative care specialist nurse, would support learning and development.

Spoke placements can be useful to if there is limited exposure to a proficiency in a specific field of nursing. For example; a mental health nursing student may arrange an “out of field” spoke placement to gain access to and participate in the care for a patient requiring urethral catheterisation (under direction supervision) if exposure is limited in their current practice learning environment.

Learners should be proactive, in terms of identifying possible spoke opportunities in discussion with their practice assessor. From this, learners should liaise with appropriate Practice education facilitators/services and / or colleagues in order to arrange the desired spoke learning opportunity.

Spoke opportunities could range from half a day to a week, depending on the nature of the opportunity and capacity of the area / individual to accommodate the learner.

Myth Busters

Accountability/Signing of PAD

If a learner has or can provide evidence to the Practice Supervisors and/or Practice Assessor that, at that time, confirms to them the learning has been achieved and they document this in the relevant documentation (PAD) then there is clear evidence base for the decision of the Practice Assessor. If a learner then, at a later date, demonstrates poor professionalism (or anything else against the Code) then it is not the accountability of the Practice Assessor as they have clear documented evidence their assessment was appropriate at that time.

Assessment responsibilities

Each practice assessor is responsible for the assessment and confirmation of the achievement of proficiencies and programmes outcomes in practice learning for the student(s) they are assigned to, for the period they are assigned to them. A good assessment is evidenced based, objective and fair, taking into account a variety of views and inputs, and student diversity, such as different learning styles, cultural backgrounds and communication styles. The practice assessor should take into account the student's history of achievement and their achievement across theory and practice. Assessment should be continuous throughout the time in which a practice assessor is assigned to a student. The practice assessor should be up to date on the progress of the student they are assigned to; collation of information on a student's performance should be managed in a way that enables this. Feedback to the student about their achievement and collaborating with them to review possible areas for improvement also forms a fundamental part of the assessment process. We do this via the PAD/ePAD

When contributing to the recommendation for progression practice assessors should take into account the student's achievement over the whole period for which they are making the decision, e.g. a placement or a year. They should also consider the student's achievement in previous parts of the programme (if any) and how they have progressed over the programme.

Once they have assessed the student's practice learning for the placement(s) they are assigned to the student, they should ensure that there is a proper handover to the next practice assessor, and any other relevant people involved in the education of the student. This includes ensuring that all relevant documentation is up to date, and any particular issues with the student's performance have been recorded or communicated with the next practice assessor and all relevant people.

Clustering Proficiencies

During assessment, it is important that consideration is given to proficiencies. However, proficiencies do not operate as stand alone assessments, pre-registration learners may in fact demonstrate a range of proficiencies within a given nursing intervention.

For example, a part three / year three learner completing a Nursing Discharge under direct supervision

In participating in or completing agreed learning opportunities with regards to safe discharge and transition in practice, while also demonstrating knowledge and understanding, the learner could within this demonstrate a number of other proficiencies. This being representative of the role of nurse, in utilising a number of skills to facilitate positive outcomes for service delivery, patient experience and health outcomes

Nursing Discharge	
P1.9	understand the need to base all decisions regarding care and interventions on people's needs and preferences, recognising and addressing any personal and external factors that may unduly influence their decisions
P1.13	demonstrate the skills and abilities required to develop, manage and maintain appropriate relationships with people, their families, carers and colleagues
P1:14	provide and promote non-discriminatory, person centred and sensitive care at all times, reflecting on people's values and beliefs, diverse backgrounds, cultural characteristics, language requirements, needs and preferences, taking account of any need for adjustments
P2.1	understand and apply the aims and principles of health promotion, protection and improvement and the prevention of ill health when engaging with people
P2.4	identify and use all appropriate opportunities, making reasonable adjustments when required, to discuss the impact of smoking, substance and alcohol use, sexual behaviours, diet and exercise on mental, physical and behavioural health and wellbeing, in the context of people's individual circumstances
P3.4	understand and apply a person-centred approach to nursing care, demonstrating shared assessment, planning, decision making and goal setting when working with people, their families, communities and populations of all ages
P3.16	demonstrate knowledge of when and how to refer people safely to other professionals or services for clinical intervention or support
P4.3	demonstrate the knowledge, communication and relationship management skills required to provide people, families and carers with accurate information that meets their needs before, during and after a range of interventions

Roles in Practice Learning

Approved education institutions (AEIs)	<ul style="list-style-type: none"> The status awarded by the NMC to an institution, or part of an institution, or combination of institutions that works in partnership with practice placement and work placed learning providers. AEIs will have provided us with assurance that they are accountable and capable of delivering NMC approved education programmes. It should be noted that acronym HEI may also be used interchangeably but where possible AEI should be the correct term. HEI does not necessarily mean that HEI has not been approved but HEI is the more recognised term.
Practice learning partners	<ul style="list-style-type: none"> Organisations that provide practice learning necessary for supporting pre-registration and post-registration students in meeting proficiencies and programme outcomes.
Learning Environments:	<ul style="list-style-type: none"> Includes any environment in terms of physical location where learning takes place as well as the system of shared values, beliefs and behaviours within these places. Examples include - any environment delivering or providing a healthcare service, digitally (telehealth) or a library. What must be in place - The Nursing and Midwifery Council (nmc.org.uk)
Student/Learner	<ul style="list-style-type: none"> Any individual enrolled onto an NMC approved education programme whether full time or less than full time.
Educators	<ul style="list-style-type: none"> In the context of the NMC Standards for education and training educators are those who deliver, support, supervise and assess theory, practice and/or work placed learning.
Practice Assessor (PA)	<ul style="list-style-type: none"> Practice assessors conduct assessments to confirm student achievement of proficiencies and programme outcomes for practice learning. Assessment decisions by practice assessors are informed by feedback sought and received from practice supervisors. Practice assessors make and record objective, evidenced-based assessments on conduct, proficiency, and achievement. The Practice Assessor works in partnership with the Academic Assessor to evaluate and recommend the student for progression for each part of the programme.
Practice Supervisor (PS)	<ul style="list-style-type: none"> Practice supervisors enable students to learn and safely achieve proficiency and autonomy in their professional role. All NMC registered nurses, midwives and nursing associates can supervise students, serving as role models for safe and effective practice and stated in the NMC Code (nmc-code.pdf – section 9). Students may be supervised by other registered health and social care professionals.

P3: Assessing needs and planning care

P4: Assessing needs and planning care

P5: Leading and managing nursing care and working in teams

P6: Improving safety and quality of care

P7: Coordinating care

Roles in Practice Learning – Glossary of Terms

Roles in Practice Learning	
Academic Assessor (AA)	<ul style="list-style-type: none"> Academic Assessors collate and confirm student achievement of proficiencies and programme outcomes in the academic environment for each part of the programme. The Academic Assessor works in partnership with the Practice Assessor to evaluate and recommend the student for progression for each part of the programme, in line with programme standards and local and national policies
Nominated Person (NP)	<ul style="list-style-type: none"> There is a nominated person for each practice setting to actively support students and address student concerns. Student and practice staff should be made aware who this person is in the learning environment. This may be a Practice Education Facilitator, Practice Educator or named placement area student link or similar.
Practice Education Facilitator (PEF)	<ul style="list-style-type: none"> Most commonly located in NHS Organisations, Practice Education Facilitators provide advice, support and guidance to students and practice staff to ensure optimum practice learning experiences. Acting as an intermediary between student, practice and AEs, as required, PEFs provide consistency in the completion of processes such as when an individual student requires additional support in order to successfully achieve any elements of their practice learning and development.
Service Users/Clients/Patients	<ul style="list-style-type: none"> Individuals or groups who receive services from nurses and midwives, healthy and sick people, parents, children, families, carers, representatives, also including educators and students and others within and outside the learning environment.
Stakeholders	<ul style="list-style-type: none"> Any person, group or organisation that has an interest or concern in the situation in question, and may affect or be affected by its actions, objectives or policies. In the context of the NMC Standards for education and training this includes students, educators, partner organisations, service users, carers, employers, other professionals, other regulators and education commissioners.

Supervision and Assessment	
Practice Assessment Documents (PAD/MORA)	<ul style="list-style-type: none"> These documents are the online document that PS/PAs complete to inform the AEIs the student has met the required outcomes in practice. The PAD/MORA must be completed accurately and in a timely manner to enable to student's assessment to be processed in the AEI and allow the student to progress or be re-assessed (see below) if necessary.
Formative	<ul style="list-style-type: none"> Usually more informal and developmental opportunities that enable student to receive feedback and develop their skills, understanding and competence. Usually, in formative placement/practice experience only a Practice Supervisor is required to support the student.
Summative	<ul style="list-style-type: none"> Formal assessments that have clear outcomes to be met within a timeframe e.g., assessment document outcomes by the end of practice experience or the Part of the programme. The results of summative assessments are usually significant and are used to determine whether a student progresses on programme or not. It is the responsibility of the PA and student to ensure that these are fully completed in practice.
Retrieval/Re-assessment	<ul style="list-style-type: none"> 'Reassessment' or 'Retrieval' is the wording used when a student has not achieved the outcome(s) required and therefore requires a further attempt in practice to achieve those outcomes. The AA and PA can agree an appropriate timeframe for achievement in this period but should be a maximum of 4 weeks. Students do not necessarily need a 4-week period for assessment of an element of the assessment document e.g., if they just have an Episode of Care to complete, that doesn't need 4 weeks to complete.
Simulation	<ul style="list-style-type: none"> An artificial representation of a real-world practice scenario that supports student development through experiential learning with the opportunity for repetition, feedback, evaluation and reflection. Effective simulation facilitates safety by enhancing knowledge, behaviours and skills. Simulation can be undertaken in any environment and can be through scenarios, role play etc.
Supernumerary	<ul style="list-style-type: none"> Students in practice or work placed learning must be supported to learn without being counted as part of the staffing required for safe and effective care in that setting. For apprentices, this includes practice placements within their place of employment; this does not apply when they are working in their substantive role. Placements should enable students to learn to provide safe and effective care, not merely to observe; students can and should add real value to care. The contribution students make will increase over time as they gain proficiency, and they will continue to benefit from ongoing guidance and feedback. Once a student has demonstrated that they are proficient, they should be able to fulfil tasks without direct oversight. The level of supervision a student needs is based on the professional judgement of their supervisors, taking into account any associated risks and the students' knowledge, proficiency and confidence. *Students aren't in the staffing numbers, but they are part of the team*
Supported learning time	<ul style="list-style-type: none"> Time to facilitate learning. This may include supernumerary status that enables students to be supported in safely and effectively achieving proficiency. This could also be time facilitated and agreed away from a clinical learning environment to undertake a different type of learning e.g., researching evidence-based practice or time in a different learning environment.

Supervision and Assessment

- Student assessments are evidence based, robust and objective. Assessments and confirmation of proficiency are based on an understanding of student achievements across theory and practice. Assessments and confirmation of proficiency are timely, providing assurance of student achievements and competence.

There are many methods to assess a student's proficiency/competence.

- Simulation – see below.
- Practical assessment - involves a PS/PA observing a student undertaking a set task or a series of set tasks in a simulated environment for example at an AEI, training provider or specialist centre.
- Observation - involves a PS/PA observing a student undertaking a task or series of tasks in the learning environment. This should be complemented by questioning from the PS/PA during or/and after the observation. Observational assessment is deemed the most appropriate assessment method for practical skills; by watching the student complete a task, they can demonstrate their competence.
- Discussion - A professional discussion can a communication between PSs, PAs, student and/or AA to assess the student's in-depth understanding of their work and clinical performance. This is not an interview! There should be more interaction and discussion than a Q&A scenario.
- Another professional's feedback – receiving feedback from colleagues is a good way to get a 360-degree view of a student's performance so PAs should seek and consider other colleagues' feedback on a student's performance of skills, knowledge, attitude and values. If you think of when you receive a handover of a patient from colleagues, then you should treat the information being past to you about a student the same.
- Presentation and questioning - A presentation involves a student presenting to PS/PA or a staff group on a particular topic. It can be followed by a questioning session from PS/PA or group. This maybe a good way to continue to make sure your learning environment is working to the latest evidence-based practices.
- Project work - Using a project as an assessment method involves the student completing an appropriate and defined piece of work. This could involve a written project e.g., patient friendly guidance or information leaflets. The project should be reviewed by the PS/PA The project should be designed to ensure that the student's work meets the needs of the assessment and is relevant to their role and allows the relevant outcomes to be demonstrated for their assessment document. Therefore, the project's subject and scope should be agreed between the PS, PA and student.
- Coaching - Coaching should empower students. It is about students being allowed to take more responsibility for their learning. A coaching model supports this, and PS/PA should, where possible and appropriate, utilise a coaching framework to enable the student to identify solutions to practice-based problems in a safe environment.

Assessment Methods

Reasonable adjustments

- Where a student requires a specific amendment to their practice related to a disability or adjustment relating to any protected characteristics as set out in the equalities and human rights legislation.

Supervision and Assessment	
Equalities and human rights legislation	<ul style="list-style-type: none"> Prohibits unlawful discrimination on the basis of age, disability, gender reassignment, marriage and civil partnership, pregnancy and maternity, race, religion or belief, sex, sexual orientation and other characteristics. Anti-discrimination laws can be country specific and there are some legally binding international protections.
(Good) health and character requirements	<ul style="list-style-type: none"> As stipulated in NMC legislation (Articles 9(2)(b) and 5(2)(b) of the Nursing and Midwifery Order 2001) 'good health' means that the applicant is capable of safe and effective practice either with or without reasonable adjustments. It does not mean the absence of a health condition or disability. Each applicant seeking admission to the register or to renew registration, whether or not they have been registered before, is required to declare any pending charges, convictions, police cautions, and determinations made by other regulatory bodies.
Professional, Statutory and Regulatory Bodies (PSRBs)	<ul style="list-style-type: none"> PSRBs are external bodies which formally accredit, approve and recognise university programmes, setting standards for and regulating entry into particular professions. For example: Nursing & Midwifery Council (NMC), Health Care Professions Council (HCPC).
Quality Assurance	<ul style="list-style-type: none"> Cheshire and Merseyside workstreams and their processes for making sure all AEIs and Practice Learning Partners comply with the PSRB standards.
Co-produced/Co-production	<ul style="list-style-type: none"> When an individual influences the support and services received, or when groups of people get together to influence the way that services are designed, commissioned and delivered.
